PROCUREMENT SECTION
CURRENT SERIAL RECORDS

U.S. DEPARTMENT OF AGRICULTURE
Consumer and Marketing Service
Meat and Poultry Inspection Program
Laboratory Services Division
Washington, D.C. 20250

Revised April 1971

For sale by the Superintendent of Documents, U.S. Government Printing Office
Washington, D.C., 20402 - Price \$1.50
Stock Number 0116 - 0075.

This publication lists chemical compounds authorized by the Laboratory Services Division, Consumer and Marketing Service for use in plants operating under the U.S. Department of Agriculture Poultry, Meat, Rabbit and Egg Products Inspection Programs.

The U. S. Department of Commerce, National Marine Fisheries Service accepts this publication as an official list of chemical compounds accepted for use in plants operating under the U.S. Department of Commerce Fishery Products Inspection Program.

*** THIS LIST IS COMPLETE AS OF APRIL 1, 1971 ***

*** Compounds authorized in letters postdating the date of publication are also acceptable. ***

PROCEDURE FOR OBTAINING COMPOUND AUTHORIZATION

The manufacturer shall submit the following information on all chemical compounds proposed for use in official poultry, meat, rabbit and egg processing plants to: Compound Evaluation Laboratory, Laboratory Services Division, Consumer and Marketing Service, U. S. Department of Agriculture, Box 348, Beltsville, Maryland 20705:

1. The complete name of each compound submitted.
2. A statement of certification from the company using words to the following effect: The compound, as it is proposed for use in the official establishments, will not deleteriously affect the poultry or poultry products, and/or meat or meat products. This certification shall also include the conditions under which this compound is believed to be satisfactory for use and the precautions necessary, if any.
3. The complete chemical formula for each compound identifying each ingredient by technical name. Identification of ingredients by brand name only is not acceptable.
 - a. The formulation must be expressed on a 100 percent basis.
 - b. Dyes must be identified by Colour Index reference.
 - c. Perfumes must be identified by proprietary name and manufacturer.
4. One label or stencil copy for each product.
5. One 4-6 ounce sample for each compound.
6. If the product is a pesticide, sanitizer, germicide, etc., a copy of the approval or the registration number from the Pesticides Regulation Division, Environmental Protection Agency, Washington, D. C. 20250.
7. When the manufacturer and distributor are not the same, the distributor must submit the following items in addition to any information required from the manufacturer.
 - a. A letter from the distributor relating his compound to that of the manufacturer.
 - b. One label or stencil copy for the compound as distributed by him.
 - c. One 4-6 ounce sample of the compound if it is repackaged or altered in any way by the distributor.

Any change in the above information voids the authorization unless new information is submitted

COMPOUNDS LISTED IN THIS PUBLICATION, WITH THE EXCEPTION OF THOSE PRECEDED BY AN ASTERISK (*) ARE AUTHORIZED FOR USE IN OFFICIAL MEAT, POULTRY, RABBIT, AND EGG PROCESSING ESTABLISHMENTS. THOSE PRECEDED BY AN ASTERISK (*) ARE AUTHORIZED FOR USE IN OFFICIAL POULTRY, RABBIT, AND EGG PROCESSING ESTABLISHMENTS ONLY. THE PERMISSIBLE USE FOR EACH COMPOUND IS SHOWN BY CODE LETTERS, AND CONDITIONS FOR USE ARE RESTRICTED BY THE CATEGORY IN WHICH IS IT PLACED.

Code letters and their meanings:

A. Compounds for use as general cleaning agents, or for use with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water.

B. Compounds for use only in soak tanks or with steam or mechanical cleaning devices in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

C. Acid cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

D. Floor and wall cleaners for use in all departments.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils in the area must be thoroughly rinsed with potable water.

E. Scouring cleaners.

Residues resulting from the use of scouring cleaners must be carefully removed from equipment and utensils by thorough rinsing with potable water.

F. Sanitizers and sanitizing cleaners for equipment and utensils.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

G. Sanitizing solutions for equipment and utensils.

Before using these compounds, food products and packaging materials must be removed from the room or carefully protected. A potable water rinse is not required following the use of these compounds in official meat, poultry, rabbit, or egg processing establishments provided that the equipment and utensils are adequately drained before contact with food so that little or no residue remains which can adulterate or have a deleterious effect on edible products. Active ingredients in solutions of these compounds may not exceed the concentrations indicated on pages A2 and A3 of this publication.

H. Shell-egg cleaning compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

I. Shell-egg destaining compounds.

Eggs that have been washed with these compounds shall be immediately subjected to a thorough potable water rinse.

J. Shell-egg sanitizing compounds.

Eggs that have been treated with these compounds shall be subjected to a thorough potable water rinse only if they are to be immediately broken for use in the manufacture of egg products.

K. Shell-egg sanitizing compounds.

Eggs that have been treated with these compounds may be broken for use in the manufacture of egg products without a prior potable water rinse.

L. Wetting agents for use in poultry scald vats.

Compounds listed in this category are to be used in accordance with conditions set forth on page A5 of this publication.

M. Boiler treatment compounds.

Steam from boiler water treated with these compounds is allowed to contact edible products. In compounds containing volatile amines the amine in the steam may not exceed the indicated concentration.

Cyclohexylamine	10 ppm	Morpholine	10 ppm
Octadecylamine	3 ppm	Hydrazine	0 ppm
Diethylaminoethanol	15 ppm		

N. Compounds for treating steam lines and cooling systems.

Steam or water from lines treated with these compounds is not permitted to contact edible products.

O. Compounds for use in sewage and drain lines only.

P. Compounds for use in toilets and dressing rooms only.

Q. Hand washing compounds.

The compounds must be dispensed from adequate dispensers located on a wall away from the processing line. After the use of the compound, the hands must be thoroughly rinsed with potable water.

R. Compounds for use in inedible product processing areas, non-processing areas, and exterior areas only.

Permission for the use of these compounds on loading docks and other similar areas is left to the discretion of the inspectors in charge of the plants.

S. Pesticides for use in all departments.

Before using these pesticide compounds, exposed food products and packaging materials must be removed from the room or protected. After using these compounds, equipment and utensils must be thoroughly rinsed with potable water before operations are resumed.

T. Pesticides for use in inedible product areas only.

These products must be used in a manner that precludes their entry into edible product areas through open windows, ventilating systems, etc.

U. Pesticides for controlled use only.

Compounds listed in this category are to be used in accordance with the conditions set forth on page A8 of this publication.

V. Compounds for washing fruits and vegetables that are to become ingredients of poultry, meat, rabbit and egg products.

After using these compounds, the products must be thoroughly rinsed with potable water.

W. Hand creams and cleaners.

The use of such hand creams or cleaners is limited to toilets and dressing rooms and for application only when users are leaving the plant.

X. Hog scald media.

Y. Tripe denuding and bleaching agents.

Treatment must be followed by thorough rinsing with potable water to remove added substances.

Z. Water Conditioners.

Compounds listed in this category are to be used in accordance with the conditions set forth on page A4 of this publication.

AA. Lubricants with incidental contact.

These compounds may be used as a lubricant, release agent, or anti-rust film on equipment and machine parts in locations in which there is exposure of the lubricated part to edible products. The amount used should be the minimum required to accomplish the desired technical effect on the equipment. If used as an anti-rust film, the compound must be removed from the equipment surface by washing or wiping as required to leave the surface effectively free of any substance which could be transferred to food being processed.

BB. Lubricants with no contact.

These lubricants may be used on equipment and machine parts in locations in which there is no possibility of the lubricant or lubricated part contacting edible products.

CC. Laundry compounds.

Laundry detergents, bleaches, and sour s may be used on fabric which contacts meat or poultry products, directly or indirectly, provided that the fabric is thoroughly rinsed with potable water at the end of the laundering operation.

FF. Hand washing and sanitizing compounds.

The compounds must be dispensed from adequate dispensers located in an area away from the processing line. The hands need not be washed prior to the use of the compound. After the use of the compound, the hands must be thoroughly rinsed with potable water.

GG. Hand sanitizing compounds.

The hands must be washed and thoroughly rinsed prior to sanitizing with the compound. The hands need not be rinsed following the use of the compound.

HH. Foam control compounds.

These compounds may be used to control foam in egg washing machines. Eggs washed in water containing these compounds shall be immediately subject to a thorough potable water rinse.

JJ. Shell egg sanitizing compounds.

Freshly washed eggs may be sanitized with these compounds only if the eggs are rinsed prior to application of the compound. A subsequent rinse is not required.

The Laboratory Services Division accepts water used in official establishments as being potable when such certifications are made by State Health Agency Authorities.

Inks, consisting only of potable water and the certified colors listed below, are chemically acceptable for use in the decharacterizing of condemned poultry in official establishments.

Ultramarine Blue	FD&C Blue #1
FD&C Blue #2	FD&C Green #3
FD&C Red #2	FD&C Red #3
FD&C Violet #1	

Decharacterizing inks including ingredients other than those listed above must be submitted by the manufacturer to the Laboratory Services Division for evaluation prior to use. The letter of acceptance issued by that Division will serve as continuing authorization for the use of such products.

Materials such as paints, solvents, and some other preparations also require authorization by this Division, but are not categorized in this publication. A letter indicating continuing chemical acceptability is issued to the supplier by the Laboratory Services Division. However, the final granting of authorization to use such products which do not come in direct or indirect contact with edible products or packaging materials is the responsibility of the officer in charge of the official processing plant. Technical assistance will be provided by the Laboratory Services Division upon request.

The purpose of this publication is to enable each inspector to have continual assurance that all compounds used in the official plant have been authorized for use by the Laboratory Services Division and are used properly, thus protecting edible products from adulteration. Questions concerning authorization, changes in formulation, etc. should be referred to the Compound Evaluation Laboratory at the address shown on page three.

Labels of pesticides and most other compounds contain adequate directions for safe use. These directions should be carefully followed at all times, and all necessary precautions taken.

Materials for General Cleaning

Preparations containing one or more of the common inorganic alkaline cleaning materials and certain wetting agents are acceptable only if they are used in a manner that will not contaminate product. All processing equipment to which these are applied must be rinsed free of residues before processing operations are resumed. Heavily perfumed preparations, strong smelling disinfectants, or deodorizers are not permitted in cleaning and sanitizing operations.

Some materials accepted for general cleaning are: Sodium carbonate (soda ash, sal soda), sodium hydroxide (caustic soda), sodium metasilicate, sodium bicarbonate, trisodium phosphate, sodium hexametaphosphate, tetrasodium pyrophosphate, sodium tripolyphosphate, soap, lime, certain wetting agents and borates (if with strong alkali and not in excess of 5%). The wetting agents accepted are those ionic and nonionic compounds for which adequate data are available to the Technical Services Division to assure they will present no hazard under the conditions of use.

Compounds containing in excess of 20 percent caustic soda, or the equivalent causticity thereof, are accepted for use with steam and mechanical cleaning devices only.

Acid Cleaners

The following acid cleaners will be permitted for removal of rust and corrosion on food processing equipment, provided they are used so there is no contact with the product.

Citric acid, lactic acid or other harmless organic acids
Glycolic acid (hydroxyacetic acid)
Hydrochloric acid (muriatic acid)
Phosphoric acid
Sodium bisulfate
Sulfamic acid

All surfaces to which they are applied should be immediately rinsed to remove residues and reduce staining or corrosion of equipment.

Sanitizing Materials

Sanitizers may be used only after thorough and effective cleaning and while product is out of the area or adequately protected from contamination.

I. Equipment and utensils (hard, non-porous surfaces).

Authorized sanitizing solutions may be used on hard, non-porous food contact surfaces such as equipment and utensils in official establishments, without a following potable water rinse, under the following conditions:

- A. Such surfaces are thoroughly drained and any collection of liquid removed therefrom before contact with product is made.
- B. The sanitizing solutions are used in accordance with instructions on the label.

C. The sanitizing solutions consist of one of the following:

1. An aqueous solution containing potassium, sodium, or calcium hypochlorite with or without the bromides of potassium, sodium or calcium.
2. An aqueous solution containing dichloroisocyanuric acid, trichloroisocyanuric acid, or the sodium or potassium salts of these acids, with or without the bromides of potassium, sodium, or calcium.
3. An aqueous solution containing potassium iodide, sodium p-toluenesulfonchloramide, and sodium lauryl sulfate in addition to components generally recognized as safe for the purpose.
4. An aqueous solution containing elemental iodine, butoxy monoether of mixed (ethylene-propylene) polyalkylene glycol having a cloud-point of 90°C. - 100°C. in 0.5 percent aqueous solution and an average molecular weight of 3300, ethylene glycol monobutyl ether and diethylene glycol monoethyl ether, together with components generally recognized as safe.
5. An aqueous solution containing elemental iodine, hydriodic acid, isopropyl alcohol, polyoxyethylene (4-12 moles) nonylphenol with a maximum average molecular weight of 748, and/or polyoxyethylene polyoxypropylene block polymers (having a minimum average molecular weight of 1900), together with components generally recognized as safe.
6. An aqueous solution containing elemental iodine, sodium iodide, sodium dioctylsulfosuccinate, and polyoxyethylene-polyoxypropylene block polymers (having a minimum average molecular weight of 1900), together with components generally recognized as safe.
7. An aqueous solution containing elemental iodine, butoxy monoether of mixed (ethylene-propylene) polyalkylene glycol (having a minimum average molecular weight of 2400), and alpha-lauroyl-omega-hydroxypoly (oxyethylene) with an average 8-9 moles of ethylene oxide and an average molecular weight of 400, together with components generally recognized as safe.
8. An aqueous solution containing dodecylbenzenesulfonic acid, polyoxyethylene-polyoxypropylene block polymers (having a minimum average molecular weight of 2800), together with components generally recognized as safe.
9. An aqueous solution containing n-alkyl (C₁₂ - C₁₈) benzyl dimethyl ammonium chloride compounds having average molecular weights of 351-380 and consisting principally of alkyl groups with 12-16 carbon atoms with or without not over 1 percent each of groups with 8 and 10 carbon atoms.
10. An aqueous solution containing trichloromelamine and either sodium lauryl sulfate or dodecylbenzenesulfonic acid, together with components generally recognized as safe.
11. An aqueous solution containing equal amounts of n-alkyl (C₁₂-C₁₈) benzyl dimethyl ammonium chloride and n-alkyl (C₁₂-C₁₄) dimethyl ethylbenzyl ammonium chloride (having an average molecular weight of 384), together with components generally recognized as safe.
12. An aqueous solution containing the sodium salt of sulfonated oleic acid, polyoxyethylene-polyoxypropylene block polymers (having an average molecular weight of 2,000 and 27 to 31 moles of polyoxyethylene), and components generally recognized as safe. All equipment and utensils treated with this sanitizing solution shall have a drainage period of 15 minutes prior to use in contact with food.

D. The solutions identified in the above paragraphs must not exceed the following concentrations:

1. Solutions identified in paragraph (1) will provide not more than 200 parts per million of available halogen determined as available chlorine.
2. Solutions identified in paragraph (2) will provide not more than 100 parts per million of available halogen determined as available chlorine.
3. Solutions identified in paragraphs (3), (4), (5), (6), and (7), of this section will contain iodine to provide not more than 25 parts per million of available iodine. The adjuvants used with the iodine will not be in excess of the minimum amounts required to accomplish the intended technical effect.

4. Solutions identified in paragraph (8) of this section will provide not more than 400 parts per million of dodecylbenzenesulfonic acid and not more than 80 parts per million of the above mentioned block polymers.

5. Solutions identified in paragraphs (9) and (11) will not provide more than 200 parts per million of the active quaternary compound.

6. Solutions identified in paragraph (10) will not provide more than 200 parts per million of available halogen determined as available chlorine and, either sodium lauryl sulfate at a level not in excess of the minimum amount required to accomplish its intended effect or, 400 parts per million of dodecylbenzenesulfonic acid.

7. Solutions identified in paragraph (12) will not provide more than 200 parts per million of sulfonated oleic acid, sodium salt.

E. The use of authorized sanitizing solutions (other than those identified in paragraphs (C) and (D) above), on hard, non-porous food contact surfaces such as equipment and utensils, must be followed by a potable water rinse.

II. Equipment and utensils (porous and semi-porous surfaces).

Concentrations of authorized sanitizing solutions, considerably higher than those identified in paragraph (D) above, are necessary to provide efficacy in treating porous and semi-porous surfaces. Any authorized sanitizer may be used on such food contact surfaces at the manufacturers' recommended concentration. Use of these higher concentrations for insuring efficacy must be followed by a potable water rinse.

III. Ceilings, Floors and Walls.

Authorized sanitizing solutions may be used for mold control on ceilings, floors and walls without a following potable water rinse, unless in the judgement of the designated official responsible for inspection activities at the establishment, the presence of such residues is objectionable.

IV. Employee's Hands

Authorized sanitizing solutions identified in paragraph (C) above may be used on the hands of employees handling meat food product without a subsequent rinse. Hand sanitizing solutions are not a substitute for washing. Accordingly, these sanitizing solutions must be used only after thorough hand washing with soaps or detergents and water. The effectiveness of any approved sanitizing solution shall be equal to or greater than that of 50 parts per million of chlorine. The establishment will make periodic tests to assure that an effective concentration of sanitizing agent is maintained. The establishment will provide the necessary test kits and directions for their use. The inspector will occasionally make verification checks.

Combination detergent-germicides, (single step compounds designed to combine hand washing with sanitizing), will be considered for approval on the basis of their equivalency to 50 parts per million of chlorine solutions as determined by the "Available Chlorine Germicidal Equivalent Concentration" method mentioned below. The use of such compounds will require a final potable water rinse, but will not require a preliminary washing with soaps or detergents.

The method for determining equivalent effectiveness, "Available Chlorine Germicidal Equivalent Concentration," is outlined in Section 5.012 of the 10th Edition of the "Official Methods of Analysis of the Association of Official Analytical Chemists."

V. Safety

Preparations of quaternary ammonium compounds and those of high available chlorine content, such as sodium or calcium hypochlorite, chloramine T, dichloramine T and chlorinated cyanuric acid should not be mixed, since such handling may cause fires.

Substances for Potable Water Treatment

Compounds recognized as safe for the treatment of potable water are accepted for the treatment of entire plant systems where the water may contact edible products with the following exceptions:

The concentration of phosphates may not exceed 20 parts per million calculated as phosphate ion.

Chlorine may be used in process water of meat establishments up to 5 parts per million calculated as available chlorine. Under reliable controls, the chlorine level may be increased up to 200 ppm in water used on meat carcasses. When so used the carcass must be air exposed to remove free chlorine and moisture before further processing.

Chlorine may be used in the process water of poultry establishments at levels acceptable to management, recognizing the self-limiting factors of effect on product, corrosion of equipment, and acceptability by plant personnel. Plant management must notify the inspector in charge when the chlorine level is increased above 20 parts per million. Chlorine must be dispensed at a constant and uniform level and the method or system must be such that a controlled rate is maintained.

Compounds used for this purpose in official poultry establishments may not alter the water retentive properties of poultry products being processed.

Substances for Cooling and Retort Water Treatment

Preparations containing a small amount of one or more of the substances listed below or others subsequently appearing in the appropriate regulation are accepted for use in the retort water, washing spray, or in cooling water for canned products.

Calcium chloride	Sodium bicarbonate
Citric acid	Sodium carbonate
Disodium-calcium ethylene- diaminetetraacetate	Sodium dodecylbenzene sulfonate
Disodium ethylenediamine- tetraacetate	Sodium gluconate
Disodium phosphate	Sodium hexametaphosphate
Diethyl sodium sulfosuccinate	Sodium lauryl sulfate
Ethylenediaminetetraacetic acid	Sodium metasilicate
Potassium pyrophosphate	Sodium nitrite
Propylene glycol	Sodium pyrophosphate
Sodium n-alkylbenzenesulfonate (alkyl group predominantly C ₁₂ and C ₁₃ and not less than 95 percent C ₁₀ to C ₁₆ .)	Sodium tripolyphosphate
	Zinc oxide
	Zinc sulfate

The use of sodium nitrite in meat establishments is limited to 600 parts per million of the treated water. The dry nitrite must be decharacterized with 0.05 percent powdered charcoal. Bulk decharacterized sodium nitrite when in cook room shall be held in a locked metal bin or container conspicuously labeled "Decharacterized Sodium Nitrite-to be used by authorized personnel only". The diethyl sodium sulfosuccinate, sodium dodecylbenzenesulfonate and sodium lauryl sulfate are restricted to a maximum of .05 percent and the zinc oxide and zinc sulfate to .01 percent of the treated water.

Potentially harmful solvents, strong caustic materials, or wetting agents, which are known to be harmful or for which toxicity data are not adequate for proper evaluation, are not allowed. These restrictions are imposed to preclude contamination of product with harmful substances should leakage of container permit the water to contact product.

Wetting Agents for Poultry Scald Vats

Alkaline materials generally recognized as safe, and those materials listed below may be used in poultry scald vats up to a maximum concentration of 1 percent unless otherwise limited. Compounds used for this purpose may not alter the water retentive properties of the processed poultry.

<u>Substances</u>	<u>Limitations</u>
Alkyl polyethoxy polypropoxy ethanol	No surfactant residue may remain on the scalded poultry 10 ppm in the scald water
Dimethylpolysiloxane	
Diethyl sodium sulfosuccinate	
Ethylenediaminetetraacetic acid, sodium salts	
Polyoxyethylene (20) sorbitan monooleate	0.0175 percent in the scald water.
Propylene glycol	
Sodium dodecylbenzenesulfonate	
Sodium 2-ethylhexylsulfate	
Sodium lauryl sulfate	

Boiler Water Treatment Materials

One or more of the following substances in amounts sufficient to serve its functional purpose are permitted for treatment of water in boilers for producing steam that may contact product.

<u>Substances</u>	<u>Limitations</u>
Acrylamide - sodium acrylate resin	
Ammonium alginate	
Cobalt sulfate (as catalyst)	
Lignosulfonic acid	
Monobutyl ether of polyoxyethylene glycol	Minimum mol. wt. 1,500
Monobutyl ether of polyoxypropylene glycol	Ditto
Polyoxyethylene glycol	Minimum mol. wt. 1,000
Polyoxypropylene glycol	Ditto
Potassium carbonate	
Sodium acetate	
Sodium alginate	
Sodium aluminate	
Sodium carbonate	
Sodium glucoheptonate	
Sodium hexametaphosphate	
Sodium humate	
Sodium hydroxide	
Sodium lignosulfonate	
Sodium metasilicate	
Sodium nitrate	
Sodium phosphate (mono-di-tri)	
Sodium polyacrylate	
Sodium silicate	
Sodium sulfate	

* Sodium sulfite
Sodium Tripolyphosphate
Tannin (including Quebracho extract)
Tetrasodium EDTA
Tetrasodium pyrophosphate
Trisodium nitrilotriacetate

Not to exceed 5 ppm in
boiler feed water.

To promote handling of preparations containing sulfite in a manner as to preclude use of sulfite in meat products such preparations must be adequately decharacterized. The preparation is considered to be acceptable if sulfite present is decharacterized by 33 percent of its weight of sodium hydroxide; by 100 percent of its weight of sodium carbonate; by 50 percent of its weight of trisodium phosphate or if the preparation contains not less than 5 percent tannin or lignin.

The Division also permits the use of the amines (hydrazine, morpholine, cyclohexylamine, diethylaminoethanol, octadecylamine or octadecylamine acetate) for the treatment of boiler water. It permits hydrazine at a level that will produce no residue in the steam condensate and octadecylamine up to a level that will not result in more than 3.0 parts per million in steam condensate. The neutralizing amines, morpholine and cyclohexylamine, are acceptable for use at such concentration that will result in not more than 10 parts per million in the steam condensate. Diethylaminoethanol is acceptable up to a level that will result in no more than 15 parts per million in the steam condensate. These amines are permitted in systems where steam is used for cooking product and rendering and deodorizing fats, since it has been determined that the quantity of amines present in steam as result of use of these in a system would not adversely affect product.

Drain Cleaners

In addition to strongly acidic or basic compounds, those containing enzymes, bacteria, or a combination thereof may be used in official establishments if the manufacturer meets the following requirements:

1. Manufacturers of compounds containing bacterial cultures will be required to provide a taxonomic identification (i.e., identification by genus and species) of the cultures used to the Technical Services Laboratory. No pathogenic bacteria will be permitted.

2. The manufacturer must provide the laboratory with a record of salmonellae analysis for each lot of the finished enzymic cleaner proposed for sale to official establishments. Testing must be conducted by a qualified microbiologist.

Hand Washing Compounds

Only liquid soaps or liquid detergents in suitable dispensing devices are allowed in the slaughtering or food processing areas of the establishment. Powdered soaps in suitable dispensing devices may be used in toilets and dressing rooms providing they contain no more than 5 percent borax.

Insecticides, Rodenticides, and Fumigants

Elimination of vermin in and around establishments is vital to the maintenance of good sanitation. In combating these pests, two things are of utmost importance:

- (a) prevent their breeding
- (b) prevent their entrance into establishments.

This may be accomplished only through a program designed for the elimination of all areas outside the establishment where these pests may breed or may be sheltered. The construction of the plant itself must be such as will insofar as possible prevent these pests from gaining entrance. When vermin do gain entrance to official establishments in spite of vigorous attempts to keep them out, certain eradication methods are permitted. The following information gives a brief statement of methods used and identifies the specific materials permitted.

Insecticides

The so-called knock down sprays containing pyrethrum extracts and other materials not having residual killing action may be used in places where edible products are handled providing exposed edible products are removed or covered before spraying is begun and the premises are cleaned by thorough washing after spraying is completed. The following insecticides may be used in such areas:

- Allethrins
- Organic thiocyanates or lethanes
- Pyrethrins
- Pyrethrum extract
- Rotenone
- ♦ SBP-1382

Concentrations of 1 percent or less, singly or in combination, of the following synergists may be used in conjunction with the insecticides listed above:

- Piperonyl butoxide
- Piperonal bis [2- (butoxyethoxy) ethyl] acetal
- N-Octyl bicycloheptane dicarboximide
- N-Propyl isome
- Sulfoxide

The concentration of synergists may be increased to a maximum of 5 percent if the product is dispensed as an aerosol spray from an adequate fogging device. An aerosol spray is defined by the Pesticides Regulation Division as one in which none of the droplets exceeds 50 microns in diameter and 80 percent of the droplets are less than 30 microns in diameter.

In contrast to the non-residual materials, there are residual insecticides which kill insects over a long period of time. These insects may fall into product since there is no practical way to protect product during operations. Therefore use of residual insecticides is restricted to areas where exposed products are not handled. The following compounds may be used in such areas in addition to those enumerated above.

Carbaryl	Entex
Chlordane	Kepone
DDT	Lindane
Dichlorvos (DDVP)	Malathion
Diazinon	Methoxychlor
Dimethoate	Ronnel
Dipterex	
Dowco 179	

Colored sugar baits containing up to 2 percent of either 0,0-diethyl-0-(isopropyl-6-methyl-4-pyrimidyl) thiophosphate (Diazinon) or 0,0-dimethyl trichlorohydroxyethyl phosphonate (Dipterex, Bayer L 1359) or malathion or other residual materials listed above, may be used for fly control around livestock pens and inedible departments. Only definite blue or green colors are acceptable.

The following substances when mixed with inert materials may be used as insect powders for the elimination of roaches under circumstances which absolutely preclude contact with product: Sodium fluoride (must be definitely colored green or blue), borax, boric acid, derris and cube roots, powdered pyrethrum, powders containing organic thiocyanates (lethane, thanite) and DDT- (insecticidal powder containing DDT must not be used in an area where edible product is handled).

Use of Automatic Insecticide Dispensers

Automatic insecticide dispensing systems may be used in processing or storage areas of official meat or poultry processing establishments provided that the dispenser is operated only when products are not being processed or stored in open containers in the area. Insecticides used in the systems must be authorized for use as indicated in category (S) of the "List of Chemical Compounds". Conditions of use must also comply with those listed for that category.

The systems may be used in areas where exposed foods are not handled without limitation on the time of operation provided that sufficient precautions are taken to preclude entry of insecticide mist or affected insects into processing or storage areas through open windows, ventilating systems, etc. Insecticides dispensed in these areas must be authorized for use as indicated in category (S) or category (T) of the above mentioned publication.

Rodenticides

In general, rodent baits are not allowed to be placed in edible product departments until after operations have been ended for the day. Strict account must be kept of the location and number of baits set out. All uneaten baits must be gathered up and destroyed before operations are begun the next day. Baits are not allowed to be placed in dry, salt cellars. They may be placed in other

departments containing enclosed meats, but care must be taken that they are so placed as to prevent contamination of the meat. Baits composed of Warfarin, red squill or Antu may be left in rooms containing exposed meat providing the layout and conditions are approved by the inspector in charge. All baits must be kept in a separate place designated by the inspector in charge. The following rodenticides may be used under circumstances that absolutely assure no contact with product: Barium carbonate, red squill, Antu (alpha-naphthylthiourea), Warfarin, 2-pivalyl-1,3 indandione (Pival, Pivalyn, etc.), 2-isovaloric-1,3 indandione (PMP), diphacinone (Diphacin), Prolin, and Norbormide.

Fumigants

Fumigation with hydrocyanic acid or methyl bromide gas is sometimes desirable for the eradication of vermin. Since each gas used is extremely poisonous to man as well as to vermin, permission for their use must first be obtained from the inspector in charge and a competent, experienced person must be placed in direct charge of the operations. Exposed meat and packaged meats need not be removed from the room being fumigated in official meat establishments. Edible products and packaging materials must be removed from the room being fumigated in official poultry establishments, and the room must be washed prior to their return. After fumigation the room should be well ventilated before inspectors or workmen enter the room. Ventilation must also be sufficient to assure complete removal of the gas from the surfaces contacted. The equipment used should be so constructed and controlled as to positively prevent any of the liquid from contaminating product. Only the gas should be permitted to escape from the fumigating equipment.

Materials Used in Washing Fruits and Vegetables

Substances generally recognized as safe and those listed below may be used for that purpose at the minimum necessary amount unless otherwise limited.

<u>Substances</u>	<u>Limitations</u>
Aliphatic acid mixture consisting of valeric, caproic, enanthic, caprylic, and pelargonic acids.	Not to exceed 1 percent in lye peeling solution to assist in the lye peeling of fruits and vegetables.
Polyacrylamide	Not to exceed 10 ppm in wash water. Contains not more than 0.2 percent acrylamide monomer.
Potassium bromide	
Sodium hypochlorite	
Sodium n-alkylbenzenesulfonate (alkyl group predominantly C ₁₂ and C ₁₃ and not less than 95 percent C ₁₀ to C ₁₆).	Not to exceed 0.2 percent in wash water. May be used in washing or to assist in lye peeling of fruits and vegetables.
Sodium dodecylbenzenesulfonate (alkyl group predominantly C ₁₂ and not less than 95 percent C ₁₀ to C ₁₆).	Ditto
Sodium 2-ethylhexyl sulfate	Ditto
Sodium mono- and dimethyl naphthalene sulfonates (mol. wt. 245-260).	
Sodium Metasilicate	

Hog Scald Agents

The following materials and others subsequently appearing in the appropriate regulation are allowed for the dehairing of hog carcasses at a level sufficient for the purpose providing that they are removed by subsequent rinsing operations.

Caustic soda	Soap (prepared by reaction of calcium, potassium, or sodium hydroxide with rosin or fatty acids of natural fats or oils).
Dimethyl polysiloxane	
Dioctyl sodium sulfosuccinate	Sodium acid pyrophosphate
Disodium calcium ethylene-diaminetetraacetate	Sodium carbonate
Disodium ethylenediamine-tetraacetate	Sodium dodecylbenzene sulfonate
Disodium phosphate	Sodium hexametaphosphate
Ethylenediaminetetraacetic acid	Sodium n-alkylbenzenesulfonate (alkyl group predominantly C ₁₂ and C ₁₃ and not less than 95 percent C ₁₀ to C ₁₆).
Lime (calcium oxide, calcium hydroxide)	Sodium lauryl sulfate
Propylene glycol	Sodium metasilicate
Sodium pyrophosphate	Sucrose
Sodium sulfate	Trisodium phosphate
Sodium tripolyphosphate	

Tripe Denuding Agents

The following materials and other subsequently appearing in the appropriate regulation are allowed to denude mucous membrane from tripe at a level sufficient for the purpose providing that they are removed from the tripe by a potable water rinse.

Lime (calcium oxide, calcium hydroxide)
Sodium carbonate
Sodium gluconate
Sodium hydroxide
Sodium metasilicate
Sodium persulfate
Trisodium phosphate

Lubricants

The following materials are allowed as lubricants, anti-rust agents, or release agents where there is a possibility of incidental food contact. The amount used should be the minimum required to accomplish the required technical effect on the equipment so treated.

<u>Substances</u>	<u>Limitations</u>
Aluminum stearate Aluminum stearoyl benzoyl hydroxide	For use as a thickening agent in mineral oil lubricants at a level not to exceed 10 percent by weight of the mineral oil.
BHA BHT Castor Oil Castor Oil, dehydrated Castor Oil, partially dehydrated Dialkyldimethylammonium aluminum silicate where the alkyl groups are derived from hydrogenated tallow fatty acids (C ₁₄ -C ₁₈) & where the aluminum silicate is derived from bentonite Dimethylpolysiloxane (viscosity greater than 300 centistokes). Fatty acids derived from animal or vegetable sources, and the hydrogenated forms of such fatty acids. 12-Hydroxystearic acid Isopropyl oleate	For use only as a gelling agent in mineral oil lubricants at a level not to exceed 7 percent by weight of the mineral oil.
Mineral Oil Petrolatum Phenyl- α -and/or phenyl- β - naphthylamine	For use only as an adjuvant to improve lubricity in mineral oil lubricants.
	For use only, singly or in combina- tion, as antioxidants in mineral oil lubricants at a level not to exceed a total of 1 percent of weight of the mineral oil.
